

ROCKET ROTATION CALIBRATION TEMPLATE

15° increments · emphasized 90° cross · A4 · print at 100% / Actual Size

USE: Center the vertical rocket over the target. Align one fin, seam, or tape pointer with 0°.

Run IMU BENCH ZERO, then rotate the same pointer to the required 15° mark or the red 90° line.

Keep the rocket nose vertical. Firmware may report the opposite sign depending on right-hand direction.

PRINT CHECK: select 100% / Actual Size. Disable Fit, Scale to Fit, and Shrink Oversized Pages.

Rocket V10 IMU bench aid · not a flight-critical measuring instrument
